

AUTOFAUCET ^{with} SST

Surround Sensor Technology

NEUTRALIFE®

Provides water automatically and reliably without the need for hand contact

- **Cost Effective**

Designed to cut down water consumption and waste. Provides the user with water only when needed, resulting in reduced water savings and associated costs by up to 70%.

- **World-class reliability using Radius™ technology**

Patented cam gear technology controls the water flow and eliminates solenoid valves that cause dripping. Proprietary 'dry' design keeps all electronics away from the water flow.

- **User friendly performance**

Break-through "surround sensor" technology senses the user from any angle, guaranteeing activation and trouble-free operation first time, every time.

- **Improves hygiene standards**

Touch-free technology and design reduces the risk of cross contamination and encourages, thorough healthy hand, washing.

radius

TOUCH-FREE TECHNOLOGY
Technology that delivers cost saving reliability, simplicity and longevity

Only products featuring Radius Technology apply proprietary smart chip microprocessors, state-of-the-art sensors and exclusive cam gear 'dry' components. Radius also includes proprietary non-stall technology providing the longest battery life and innovative delivery systems.

Operation:

1. A surround sensor continuously scans the detection zone around the spout.
2. When the user's hand comes into range of the sensor's detection zone, the valve is activated.
3. After the user removes their hand, the valve closes. The circuit automatically resets for the next user.
4. Operates using energy detection sensor technology.

Specifications

Battery Power	4 D-cell alkaline batteries that last up to 3 years
Mounting Hole	222mm x 300mm
Operating Water Pressure	0.48 - 12.06 Bar
Operating Temperature	35°F to 159°F (2°C to 70°C)
Max Running Time	30 seconds
Choice of Aerators	0.032 L/S – standard (supplied with Faucet) 0.095 L/S – for water savings (optional) 0.126 L/S – for hard water (optional)
